SHAIK ABDUL WAZEED

Azure Data Engineer | ADF, Databricks & PySpark

Nellore, Andhra Pradesh, India | +91 7997663465 | wazeedmessie345@gmail.com | linkedin.com/in/abdulwazeed-shaik-a630a4248

PROFESSIONAL SUMMARY

Azure Data Engineer with 4+ years of experience in designing, developing, and maintaining scalable ETL/ELT data pipelines using Microsoft Azure data services. Strong hands-on experience with Azure Data Factory (ADF), Azure Data Lake Storage Gen2 (ADLS Gen2), Azure Databricks, PySpark, SQL, and Delta Lake.

Experienced in building end-to-end data ingestion and transformation pipelines, implementing incremental data loads, handling large datasets, optimizing Spark jobs, and developing reliable data integration solutions. Good understanding of Medallion Architecture, Delta Lake, SCD Type 1/Type 2, data quality, pipeline parameterization, error handling, monitoring, and performance optimization.

Strong knowledge of SQL including joins, CTEs, subqueries, window functions, aggregations, stored procedures, views, query optimization, and analytical queries. Experienced in working with structured and semi-structured data and developing production-ready ETL/ELT workflows.

TECHNICAL SKILLS

Cloud	Microsoft Azure
Azure Services	Azure Data Factory, Azure Databricks, ADLS Gen2, Azure Blob Storage, Azure SQL Database, Azure Logic Apps, Azure Monitor, Azure Virtual Machines, Azure Storage Explorer, Azure Key Vault
Big Data / Transform	Azure Databricks, PySpark, Spark SQL, Delta Lake, Medallion Architecture (Bronze/Silver/Gold)
ADF Activities	Copy Data, Lookup, Get Metadata, If Condition, ForEach, Execute Pipeline, Databricks Notebook, Stored Procedure, Script, Web Activity, Set/Append Variable
Programming	SQL, Python, PySpark
Databases	SQL Server, Azure SQL Database
Data Quality & Ops	Null/duplicate/schema validation, business rule checks, incremental (watermark) loads, SCD Type 1/2, error handling, monitoring & alerting
Tools & Reporting	Git, Power BI

PROFESSIONAL EXPERIENCE

Azure Data Engineer — Present

Glauben Industries Pvt Ltd — Hyderabad, India

Project 1: Insurance Policy & Claims Data Platform

- Designed and developed scalable ETL/ELT pipelines using Azure Data Factory to ingest daily policy, premium, and claims files (CSV, JSON, Excel, relational DB, and API-based sources) into ADLS Gen2.
- Developed ADF pipelines using Copy Activity, Lookup, ForEach, If Condition, Execute Pipeline, Stored Procedure, Web Activity, and Get Metadata to build a parameterized, metadata-driven ingestion framework covering 40+ policy and claims source tables.
- Implemented incremental data loading on high-volume claims tables using watermark columns, timestamps, and control tables, avoiding unnecessary full loads and reducing daily pipeline runtime significantly.
- Developed transformation logic in Azure Databricks using PySpark for cleansing, standardization, enrichment, and joining of policyholder, policy, and claims datasets, including derived fields such as claim-to-premium ratio and policy tenure.
- Implemented Delta Lake tables across Bronze, Silver, and Gold layers following Medallion Architecture, and applied SCD Type 2 logic to maintain historical changes to policyholder and policy dimension data.
- Optimized PySpark jobs using filter pushdown, partitioning, caching, and broadcast joins to improve performance on large claims datasets; used Spark SQL and DataFrame APIs for aggregations such as loss ratio by region and product line.

- Implemented data quality checks including null validation, duplicate detection, schema validation, record count validation, and business rule validation (e.g., valid claim status codes) within the pipeline.
- Designed error handling and failure notification mechanisms within ADF pipelines, and monitored pipeline executions to investigate failed activities and data processing issues for nightly regulatory reporting SLAs.
- Loaded conformed data into Azure SQL Database using Stored Procedure activities, developing complex SQL queries (joins, CTEs, window functions, ranking functions) for actuarial and regulatory reporting.

Project 2: Retail Sales & Inventory Analytics Pipeline

- Built ADF pipelines to ingest daily point-of-sale, inventory, and product catalog data from 200+ retail stores (CSV, JSON, Excel, and API-based sources) into ADLS Gen2, using ForEach activities to process multi-store file batches dynamically.
- Implemented parameterized and metadata-driven pipelines to process multiple store and region datasets without duplicating pipeline logic, using Lookup and control tables to drive dynamic execution.
- Developed PySpark transformations in Azure Databricks to cleanse, standardize, and join sales, customer, and product dimension data, computing derived columns such as net revenue, discount %, and basket size.
- Designed Bronze, Silver, and Gold layered Delta Lake tables following Medallion Architecture, applying SCD Type 1 updates for fast-changing store/product attributes and SCD Type 2 for historical price and promotion tracking.
- Created reusable PySpark functions and modular Databricks notebooks for sales aggregation logic (daily/weekly sales by store, region, and SKU), improving maintainability and reducing code duplication across pipelines.
- Implemented data quality checks (null checks, referential checks against product/store master data, threshold-based anomaly flags) with If Condition activities routing bad batches to quarantine and triggering failure alerts.
- Implemented partitioning strategies in ADLS Gen2 and Delta tables based on store/region and date to improve query performance for downstream reporting.
- Used Azure Key Vault to securely manage database credentials and connection secrets across all pipeline linked services; used Git-based version control for ADF pipelines and Databricks notebooks.
- Loaded curated inventory and sales datasets into Azure SQL Database to feed Power BI dashboards used for stock replenishment and demand forecasting; participated in Agile ceremonies including sprint planning, stand-ups, backlog refinement, and retrospectives.

EDUCATION

Bachelor's Degree in B.Com
Vikrama Simhapuri University — 2021

DECLARATION

I hereby declare that the information provided above is true and correct to the best of my knowledge.
